LEX SUPERMUS

ADVOCATE BAR COUNCIL VERIFICATION MODULE

Professional Developer Implementation Prompt

INDIA | LEGAL TECHNOLOGY | ADVOCATE ONBOARDING

Purpose

A secure, auditable advocate registration and professional identity verification module for the Lex Supermus legal technology platform.

Product Requirements & Engineering Specification

MASTER IMPLEMENTATION PROMPT

Act as a Senior Software Architect, Full-Stack Engineer, Database Architect and Legal Technology Product Designer. Develop a complete Advocate Registration, Bar Council Enrolment Verification and Professional Identity Management Module for the Indian legal technology platform **LEX SUPERMUS**.

1. OBJECTIVE

Create a secure and reliable advocate onboarding system that verifies advocates using their State Bar Council enrolment details and supporting documentation. The system must distinguish between:

- Registered user.
- Advocate applicant.
- Enrolment details submitted.
- Verification pending.
- Verified advocate.
- Verification rejected.
- Verification suspended or revoked, where supported by authoritative evidence and appropriate review.

Do not treat ordinary user registration as proof of advocate status.

2. ADVOCATE REGISTRATION FORM

Create a professional registration interface containing:

Personal information

- Full legal name.
- Date of birth.
- Email address.
- Mobile number.
- Residential address.
- Profile photograph.

Professional information

- State Bar Council.
- Bar Council enrolment number.
- Enrolment date.
- Enrolment certificate.
- Advocate ID card, if available.
- Current practice location.
- Years of experience.
- Areas of legal specialisation.
- Languages known.
- Professional profile description.

Practice categories

- Civil Law.

- Criminal Law.
- Constitutional Law.
- Corporate Law.
- Family Law.
- Intellectual Property Law.
- Cyber Law.
- Consumer Law.
- Labour Law.
- Taxation Law.
- Arbitration.
- Property Law.

3. BAR COUNCIL VERIFICATION ENGINE

- **Step 1:** Applicant submits enrolment information.
- **Step 2:** Validate required fields and document formats.
- **Step 3:** Check enrolment information against authoritative State Bar Council records or authorised verification channels, wherever available.
- **Step 4:** If automated verification is unavailable, route the application to an administrator for manual verification.
- **Step 5:** Record the verification result, reviewer, date, evidence and reason.
- **Step 6:** Activate the verified advocate profile after approval.

Never fabricate a successful verification result or assume that a valid-looking enrolment number proves authenticity.

4. VERIFICATION STATUS MANAGEMENT

Implement these statuses:

- NOT_SUBMITTED
- SUBMITTED
- UNDER_REVIEW
- ADDITIONAL_INFORMATION_REQUIRED
- VERIFIED
- REJECTED
- SUSPENDED
- REVOKED

Implement status transitions with appropriate authorisation and audit logging.

5. ADVOCATE DASHBOARD

- Profile completion.
- Verification status.
- Professional information.
- Document management.
- Practice categories.

- Professional opportunities.
- Legal research tools.
- Legal digital library.
- Case-management tools.
- Appointment management.

Restrict professional features according to verification status and applicable legal requirements.

6. ADMIN DASHBOARD

- View applications.
- Search by enrolment number.
- Filter by State Bar Council.
- View submitted documents securely.
- Request additional information.
- Approve applications.
- Reject applications with reasons.
- Record verification evidence.
- Suspend or revoke verification following an authorised process.
- Maintain complete audit history.

No administrator action should silently overwrite previous verification records.

7. DATABASE DESIGN

Create the following PostgreSQL tables:

- bar_councils
- advocate_profiles
- advocate_enrolments
- advocate_documents
- advocate_verifications
- verification_audit_logs
- verification_requests

Requirements

- Primary keys.
- Foreign keys.
- Unique constraints where appropriate.
- created_at and updated_at timestamps.
- Soft deletion where appropriate.
- Indexing for enrolment number and State Bar Council.
- Secure document references.

Do not store sensitive identity documents as publicly accessible URLs.

8. BACKEND API DEVELOPMENT

Use Java Spring Boot and Spring Security. Implement the following REST APIs:

- POST /api/advocates/register
- GET /api/advocates/profile
- PUT /api/advocates/profile
- POST /api/advocates/documents
- POST /api/advocates/verification/submit
- GET /api/advocates/verification/status
- GET /api/admin/advocates/pending
- GET /api/admin/advocates/{id}
- POST /api/admin/advocates/{id}/approve
- POST /api/admin/advocates/{id}/reject
- POST /api/admin/advocates/{id}/request-information
- GET /api/admin/advocates/{id}/audit-history

Additional requirements

- Input validation.
- Role-based authorisation.
- JWT authentication.
- Rate limiting.
- Secure exception handling.
- Audit logging.

9. FRONTEND DEVELOPMENT

Use Next.js, React, TypeScript and Tailwind CSS. Create the following pages:

- Advocate Registration.
- Professional Details.
- Bar Council Details.
- Document Upload.
- Verification Status.
- Advocate Dashboard.
- Admin Verification Dashboard.
- Application Review.
- Verification History.

Visual design

- Premium legal-tech interface.
- Navy blue, gold and white.
- Responsive design.
- Professional typography.

- Accessible forms.
- Clear status indicators.

10. SECURITY AND PRIVACY

- Encryption in transit and at rest.
- Secure document storage.
- Access-controlled document viewing.
- Malware scanning of uploads.
- File-type and file-size validation.
- Consent management.
- Data retention policies.
- Audit trails.
- Protection against IDOR, CSRF, XSS and SQL injection.
- Least-privilege access control.

Do not expose an advocate’s enrolment documents, private contact information or identity documents to ordinary users.

11. LEGAL AND REGULATORY COMPLIANCE

Design the module in accordance with applicable:

- Advocates Act, 1961.
- Bar Council of India Rules.
- Relevant State Bar Council procedures.
- Applicable professional-conduct requirements.
- Digital Personal Data Protection Act, 2023, and applicable rules.

Distinguish enrolment verification from current right-to-practise status and Certificate of Practice requirements.

Do not introduce paid lead generation, referral commissions or prohibited advocate solicitation features.

12. TESTING REQUIREMENTS

Write unit tests, integration tests and security tests. Test:

- Duplicate enrolment numbers.
- Invalid enrolment information.
- Missing documents.
- Incorrect document formats.
- Unauthorised verification approval.
- Invalid status transitions.
- Suspended advocates.
- Rejected applicants.
- Document access restrictions.
- Audit history integrity.

13. DEVELOPMENT DELIVERABLES

- Complete project structure.
- Database ER diagram.
- PostgreSQL migration scripts.
- Spring Boot backend implementation.
- REST API documentation.
- Next.js frontend pages.
- Authentication and authorisation.
- Advocate verification workflow.
- Admin dashboard.
- Automated tests.
- Docker configuration.
- Environment variable template.
- Deployment instructions.

14. IMPLEMENTATION RULES

- Do not create dummy verification success.
- Do not hardcode Bar Council enrolment records.
- Do not expose confidential documents.
- Do not merge advocate and student permissions.
- Use reusable components.
- Follow clean architecture and SOLID principles.
- Maintain readable and maintainable code.
- Implement real database persistence.
- Do not leave critical functionality as placeholder buttons.
- Explain all external integrations and their prerequisites.

FINAL INSTRUCTION

First analyse the complete requirements and propose the database ER diagram, backend architecture, frontend page hierarchy and API contracts. Then implement the module incrementally, testing each layer before proceeding. The result must be production-oriented, secure, maintainable and suitable for integration into the larger LEX SUPERMUS platform.
